### Background

The first AGWA/AGWT joint conference was held in Ontario, CA in 2000. Since then, this annual event has provided an important information exchange and networking opportunity for California’s water agencies, utilities and water districts, and for all water professionals (scientific, engineering, managerial, legal, environmental, regulatory), end-users of water, and local and state elected officials involved with water policy issues. The focus of every program is on current groundwater management issues in California.

Learn about the Advanced Purification Center. A new demonstration facility that tests an innovative process to purify wastewater for groundwater replenishment. It could lead to a full-scale program that purifies 150 million gpd and replenishes four groundwater basins in Southern California, making it one of the largest of its kind in the world. The program is a partnership of The Metropolitan Water District of Southern California and the Sanitation Districts of Los Angeles County.

**PASO ROBLES BASIN - FIRST JURY TRIAL OVER GROUNDWATER RIGHTS IN CALIFORNIA**  
A Santa Clara County Superior Court jury found on Sept. 24, 2018 that a group of public water suppliers in San Luis Obispo County had the right to pump groundwater from a large groundwater basin in San Luis Obispo and Monterey Counties. The four-week trial pitted agricultural interests against public water suppliers during a time of extreme water tension due to drought and drought-like conditions in the State. What comes next?

**THE CLOUD & WATER RESOURCES MANAGEMENT**

Moderator to be announced

In the natural hydrologic system, water moves from the meteorological clouds to aquifers. In the modern management of groundwater, the movement of hydrogeological data is from the ground to the cyberspace cloud. Management is the key to groundwater sustainability. Does the “cyberspace cloud” help?

**DOWN-HOLE TECHNOLOGY FOR EFFICIENT GROUNDWATER PUMPING, RECHARGE AND WATER QUALITY CONTROL**

Water engineers, consultants and agency managers can benefit from technology updates about what happens down a well. Water wells are engineered holes in the ground. The equipment that is selected for pumping, recharge and for refining well design can have significant economic impacts on construction and operation costs. Drawing up specifications for wells is best done with an understanding of equipment options and awareness of how advance information of subsurface geochemistry can inform pumping and treatment decisions.

**Session 5**

**CHALLENGES TO ENSURING SAFE SUSTAINABLE GROUNDWATER SUPPLY IN RURAL AREAS OF CALIFORNIA**

Water Supply responsibilities in California extend beyond providing for the needs of the major irrigation industries and the water agencies with large service populations. The more rural areas of the state also have sustainability and water quality issues. As more people are choosing to live in the foothills and in areas away from major urban centers and the reach of pipelines, there needs to be a closer focus on how groundwater professionals can help maintain affordable and safe water supply for small systems and homeowners.

WATER AGENCY/WATER DISTRICT: COMMUNICATION, OUTREACH AND EDUCATION INITIATIVES  
WHY THEY ARE NEEDED AND HOW SUCCESS IS MEASURED**

How do agency educators decide on their targets? Is "outreach" different from "education" and is there a dividing line between public relation programs and education? What initiatives are shown to be effective and how can their effectiveness be assessed?

GEOPHYSICS AT THE FRESH WATER/SALT WATER INTERFACE OF SOUTHERN CALIFORNIA'S COASTAL AQUIFERS**

Coastal groundwater conditions in Southern California range from freshwater discharge off-shore, uncontrolled salt water intrusion through multilayered and faulted aquifer systems, and relic intrusion plumes trapped behind fresh water barrier well systems. Data from electrical resistivity and time domain electromagnetic induction from airborne geophysical investigations can provide valuable information for characterizing and modeling saline/freshwater dynamics at coastal and inland sites.
