

Miami-Dade Water and Sewer Department South District Wastewater Treatment Plant Deep Injection Well Drilling Projects

Sunday, March 1, 2020
2:30 – 5:00pm

- The meeting place and starting point for the field trip is at the Security gate located at 8950 SW 232nd St, Miami, FL 33190 at 2:30pm on Sunday, March 1, 2020.
- Field trip participants must make their own travel arrangements to and from South District Wastewater Treatment Plant. Participants are not required to wear PPE if they stay in the Construction trailer on site. Hard hats and safety vests will be provided. **Participants must wear long pants, shirts with sleeves (long or short), and sturdy shoes or boots to go to the drilling construction sites.**
- Coffee and snacks will be provided.
- The field trip will include a presentation by Project Professional Geologist Neil Johnson.
- Limited space. First come-first served. Visit www.agwt/org.events to sign up for this field trip under 2020 Miami, FL Deep Well Injection Conference event.

The field trip will include a presentation at the Construction Office for the Deep Injection Well drilling project at South District, and will outline the purpose, construction sequence and drilling and testing program. Participants will be able to view and discuss the lithology, geophysical logs, and technology incorporated into the project. The USGS will be on site to discuss their research in the area. The field trip will provide participants the opportunity to understand the geology and hydrogeology of the site in the context of the Florida Department of Environmental Protection Underground Injection Control Program requirements and the regional geologic framework.

These feral cats live at the construction trailers and could use a home if you are interested in adopting them.
