

# INFORMATION-EXCHANGE WORKSHOP

## SOLUTIONS TO LEGACY GROUNDWATER CONTAMINATION

# PFAS and other emerging contaminants

# Albuquerque - Wednesday July 24

State Bar of New Mexico, 5121 Masthead NE, Albuquerque, NM 87199

### “110 million Americans have some PFAS in their drinking water”

(Estimate from EWG—Environmental Work Group)

The American Ground Water Trust (AGWT) is a 501(c)(3) non-profit education organization  
See web-site for registration rates for students and employees of AGWT corporate members

This workshop program has been held in Mt Laurel, NJ, Pittsburgh, PA, Cincinnati, OH, Grand Rapids, MI and in Sacramento and Montclair, CA.

#### Continuing Education

The AGWT will issue Certificates of Attendance and will apply for continuing education approval for professions with an interest in water supply and water quality

Many states are confronting contamination of groundwater and surface water from so-called emerging contaminants. There are technical, regulatory and legal challenges for communities responding to groundwater contamination. Water providers are faced with an urgent need to deal with concerns about health issues, regulations, property values, remediation options and infrastructure costs. The workshop program will provide objective information to facilitate water providers, elected officials, citizens and community leaders with policy, planning and management decisions.

Over 4,700 PFAS (per- and polyfluorinated alkyl substances) occur in the world today and many PFAS compounds transform into highly persistent perfluorinated chemicals in the environment. The compounds are connected to several cancers, liver, kidney and reproductive disorders and other health effects. Other contaminants resulting from fuel spills, manufacturing processes and improper disposal practices pose additional health risks and are reducing the inventory of economically usable groundwater.

Workshop participants will learn about the chemistry background, sampling & testing protocols, treatment technologies, cost recovery options and the characteristics of environmental persistence of contamination. Presenters will provide case studies of technical solutions for treatment and remediation. The program will also discuss regulatory and legal solutions to protecting drinking water integrity from a range of contaminants and will consider ways to find funding to pay for treatment of contaminated groundwater.
